

Travel Policy & City Tier API Prompts

MODULE: TRAVEL POLICY

This module defines travel entitlements based on employee Grade and travel type.

ENTITY: TRAVEL POLICY

Fields:

- PolicyID (Primary Key)
- GradeID (FK → Grade table, e.g., G1–G6)
- TravelType (Domestic / International)
- FlightClass (Economy / Business / First)
- HotelCategory (3Star / 4Star / 5Star)
- PerDiemRate (Daily allowance)
- LocalConveyanceLimit (Max local travel expense)
- EffectiveDate (Policy start date)
- Status (Active / Superseded)
- CreatedDate (optional)
- UpdatedDate (optional)

REQUIREMENTS:

1. CRUD APIs

- Create, Update, Get, Deactivate policies

2. Business Rules

- One active policy per GradeID + TravelType
- Supersede old policy on update
- Validate positive values for allowances

3. Validation

- Grade must exist
- Enumerations validated

4. Filtering APIs

- By GradeID, TravelType, Active status

5. Advanced API

- Fetch policy using GradeID + TravelType

6. Database

- FK on GradeID, indexed

MODULE: CITY TIER

This module defines location-based cost classifications.

ENTITY: CITY TIER

Fields:

- CityID (Primary Key)
- CityName
- Country
- Tier (Tier1 / Tier2 / Tier3 / International)
- PerDiemRate
- HotelCapPerNight
- CreatedDate (optional)
- UpdatedDate (optional)

REQUIREMENTS:

1. CRUD APIs

- Create, Update, Get, Delete city tiers

2. Business Rules

- Unique city per country
- Positive cost fields

3. Validation

- Tier enums
- Required fields

4. Filtering APIs

- By Tier, Country

5. Advanced API

- Fetch city cost details

6. Integration

- Combine with TravelPolicy for final rules

7. Database

- Unique constraint on CityName + Country

OUTPUT EXPECTED

Provide:

- Entity classes
- DTOs
- Repository
- Service layer
- Controller APIs
- Validation
- Sample JSON
- SQL schema

Ensure production-ready implementation.
